Pro'IFIC

PROLOGIC FIRST

More Value for Money

Pro'IFIC

Pro'IFIC is Prologic First's Integrated Financial, Inventory and F&B Costing software developed, specifically, for hospitality businesses.

Unlike generic ERP software, Pro'IFIC needs no customization or configuration for hotels, restaurants, clubs or any other hospitality business. It is ready-to-use, when delivered, with all the nuances specific to the hospitality vertical. All the way across to preparation of monthly reports as per the industry standard Uniform System of Accounts.

Pro'IFIC modules are integrated so that data flows smoothly and accurately across functional units. For example, rates and quantities are validated at Receiving against Purchase Orders & Material Requisitions and the liability is booked into the Creditors Ledger with it's effect on the General Ledger ... all electronically and with minimal human intervention.

Pro'IFIC offers unprecedented control over back office ledgers. Access to the system is restricted or allowed by job roles. Transactions, once posted, may not be edited. Auditable correction journals must be posted to effect changes. Control cards and audit reports allow for quick reconciliation and tallying.

Innovative management reports, like Debtors Payment monitor and Inventory Ageing Report, provide quality information that makes management more effective.

Pro'IFIC will improve the accuracy, efficiency and effectiveness of your back office operations.

Functional summary

Accounting

■ Receivables

- Import data from front-office
- Edit / merge front office transactions
- Group Receivables Account by General Ledger Control Account
- Auto-generation of transaction numbers by type
- Post back office invoices
